HIERARCHICAL DETERMINISTIC WALLET

Python-based library for the implementation of a hierarchical deterministic wallet generator for over 140+ multiple cryptocurrencies. It allows the handling of multiple coins, multiple accounts, external and internal chains per account and millions of addresses per the chain.

Simple Bitcoin mainnet HDWallet generator:

```
#!/usr/bin/env python3

from hdwallet import HDWallet
from hdwallet.utils import generate_entropy
from hdwallet.symbols import BTC as SYMBOL
from typing import Optional

import json

# Choose strength 128, 160, 192, 224 or 256
STRENGTH: int = 160 # Default is 128
# Choose language english, french, italian, spanish, chinese_simplified, chinese_
↳ traditional, japanese or korean
LANGUAGE: str = "korean" # Default is english
# Generate new entropy hex string
ENTROPY: str = generate_entropy(strength=STRENGTH)
# Secret passphrase for mnemonic
PASSPHRASE: Optional[str] = None # "meherett"

# Initialize Bitcoin mainnet HDWallet
hdwallet: HDWallet = HDWallet(symbol=SYMBOL, use_default_path=False)
# Get Bitcoin HDWallet from entropy
hdwallet.from_entropy(
    entropy=ENTROPY, language=LANGUAGE, passphrase=PASSPHRASE
)

# Derivation from path
# hdwallet.from_path("m/44'/0'/0'/0'/0")
# Or derivation from index
hdwallet.from_index(44, hardened=True)
hdwallet.from_index(0, hardened=True)
hdwallet.from_index(0, hardened=True)
hdwallet.from_index(0)
```

(continues on next page)

(continued from previous page)

```
hdwallet.from_index(0)
```

```
# Print all Bitcoin HDWallet information's
print(json.dumps(hdwallet.dumps(), indent=4, ensure_ascii=False))
```

```

```

For more info see the BIP specs.

BIP	Titles
BIP39	Mnemonic code for generating deterministic keys
BIP85	Deterministic Entropy From BIP32 Keychains
BIP32	Hierarchical Deterministic Wallets
BIP44	Multi-Account Hierarchy for Deterministic Wallets
BIP49	Derivation scheme for P2WPKH-nested-in-P2SH based accounts
BIP84	Derivation scheme for P2WPKH based accounts
BIP141	Segregated Witness (Consensus layer)

INSTALLING HDWALLET

The easiest way to install `hdwallet` is via `pip`:

```
$ pip install hdwallet
```

To install `hdwallet` command line interface globally, for Linux `sudo` may be required:

```
$ pip install hdwallet[cli]
```

After you have installed, type `hdwallet` to verify that it worked:

```
$ hdwallet
Usage: hdwallet [OPTIONS] COMMAND [ARGS]...

Options:
  -v, --version  Show HDWallet version and exit.
  -h, --help     Show this message and exit.

Commands:
  generate (g)  Select Generate for HDWallet.
  list (l)     Select List for HDWallet information.
```

If you want to run the latest version of the code, you can install from `git`:

```
$ pip install git+git://github.com/meherett/python-hdwallet.git
```

For the versions available, see the [tags on this repository](#).

2.1 Development

We welcome pull requests. To get started, just fork this [github repository](#), clone it locally, and run:

```
$ pip install -e .[cli,tests,docs] -r requirements.txt
```

COMMAND LINE INTERFACE (CLI)

CRYPTOCURRENCIES

This library simplifies the process of generating a new HDWallet's for:

Note: All Cryptocurrencies testnet networks default paths are set to m/44'/1'/0'/0/0 value.

Cryptocurrencies	Symbols	Mainnet	Testnet	Seg-wit	Coin Type	Default Paths
Anon	ANON	Yes	No	No	220	m/44'/220'/0'/0/0
Argoneum	AGM	Yes	No	No	421	m/44'/421'/0'/0/0
Artax	XAX	Yes	No	No	219	m/44'/219'/0'/0/0

HDWALLET

Class Hierarchical Deterministic Wallet

```
class hdwallet.hdwallet.HDWallet(symbol: str = 'BTC', cryptocurrency: Optional[Any] = None, semantic: Optional[str] = None, use_default_path: bool = False)
```

Hierarchical Deterministic Wallet

Parameters

- **symbol** (*str*) – Cryptocurrency symbol, defaults to BTC.
- **cryptocurrency** (*Cryptocurrency*) – Cryptocurrency instance, defaults to None.
- **semantic** (*str*) – Extended semantic, defaults to P2PKH.
- **use_default_path** (*bool*) – Use default derivation path, defaults to False.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

Note: To initialize HDWallet symbol or cryptocurrency is required.

```
from_entropy(entropy: str, language: str = 'english', passphrase: Optional[str] = None) →  
hdwallet.hdwallet.HDWallet
```

Master from Entropy hex string.

Parameters

- **entropy** (*str*) – Entropy hex string.
- **language** (*str*) – Mnemonic language, default to english.
- **passphrase** (*str*) – Mnemonic passphrase or password, default to None.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

```
>>> from hdwallet import HDWallet  
>>> from hdwallet.symbols import BTC  
>>> hdwallet = HDWallet(symbol=BTC)  
>>> hdwallet.from_entropy(entropy="ee535b143b0d9d1f87546f9df0d06b1a", language=  
↪ "english", passphrase=None)  
<hdwallet.hdwallet.HDWallet object at 0x000001E8BFB98D60>
```

```
from_mnemonic(mnemonic: str, language: Optional[str] = None, passphrase: Optional[str] = None) →  
hdwallet.hdwallet.HDWallet
```

Master from Mnemonic words.

Parameters

- **mnemonic** (*str*) – Mnemonic words.
- **language** (*str*) – Mnemonic language, default to None.
- **passphrase** (*str*) – Mnemonic passphrase or password, default to None.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="sceptre capter sequence girafe absolu_
↳relatif fleur zoologie muscle sirop saboter parure", passphrase=None)
<hdwallet.hdwallet.HDWallet object at 0x0000001E8BFB98D60>
```

from_seed(*seed: str*) → *hdwallet.hdwallet.HDWallet*

Master from Seed hex string.

Parameters **seed** (*str*) – Seed hex string.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import ETH
>>> hdwallet = HDWallet(symbol=ETH)
>>> hdwallet.from_seed(seed=
↳"8d5f4fe5b81a6a6a18b08603b6b3f59df9f4bbb25d10c55d23e0cbdc5ee385e5fddad9d7e6114f11afdec459283
↳")
<hdwallet.hdwallet.HDWallet object at 0x0000001E8BFB98D60>
```

from_xprivate_key(*xprivate_key: str, strict: bool = False*) → *hdwallet.hdwallet.HDWallet*

Master from XPrivate Key.

Parameters

- **xprivate_key** (*str*) – Root or Non-Root XPrivate key.
- **strict** (*bool*) – Strict for must be root xprivate key, default to False.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_xprivate_key(xprivate_key=
↳"xprv9s21ZrQH143K3xPGUzpqgJeKtRdjHkK6muBJo8v7rEVRzT83xJgNcLpMoJXUf9wJFKfuHR4SGvf9gdShh4t9Vmjj
↳")
<hdwallet.hdwallet.HDWallet object at 0x0000001E8BFB98D60>
```

from_xpublic_key(*xpublic_key: str, strict: bool = False*) → *hdwallet.hdwallet.HDWallet*

Master from XPublic Key.

Parameters

- **xpublic_key** (*str*) – Root or Non-Root XPublic key.
- **strict** (*bool*) – Strict for must be root xpublic key, default to False.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_xpublic_key(xpublic_key=
↳ "xpub661MyMwAqRbcGSTjb2Mp3Sb4STUDhD2x986ubXKjQa2QsFTCVqzdA98qeZjcnCHT1AaZcMSjiP1HJ16jH97q72R
↳ ")
<hdwallet.hdwallet.HDWallet object at 0x0000001E8BFB98D60>

```

from_wif(wif: str) → *hdwallet.hdwallet.HDWallet*

Master from Wallet Important Format (WIF).

Parameters wif (str) – Wallet important format.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_wif(wif="KzsHWUJsrTWUUhBGPfMMxLLydiH7NhEn6z7mKHXD5qNkUWaC4TE
↳ ")
<hdwallet.hdwallet.HDWallet object at 0x0000001E8BFB98D60>

```

from_private_key(private_key: str) → *hdwallet.hdwallet.HDWallet*

Master from Private Key.

Parameters private_key (str) – Private key.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_private_key(private_key=
↳ "6cd78b0d69eab1a47bfa53a52b9d8c4331e858b5d7a599270a95d9735fdb0b94")
<hdwallet.hdwallet.HDWallet object at 0x0000001E8BFB98D60>

```

from_public_key(public_key: str) → *hdwallet.hdwallet.HDWallet*

Master from Public Key.

Parameters public_key (str) – Public key.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_public_key(public_key=
↳ "02f93f58b97c3bb616645c3dda256ec946d87c45baf531984c022dd0fd1503b0a8")
<hdwallet.hdwallet.HDWallet object at 0x0000001E8BFB98D60>

```

from_path(path: Union[str, hdwallet.derivations.Derivation]) → *hdwallet.hdwallet.HDWallet*

Derivation from Path.

Parameters path (str, Derivation) – Derivation path.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_xprivate_key(xprivate_key=
↳ "xprv9s21ZrQH143K3xPGUzpogJeKtRdjHkK6muBJo8v7rEVRzT83xJgNcLpMoJXUf9wJFKfuHR4SGvf9gdShh4t9Vmjj")
↳ ")
>>> hdwallet.from_path(path="m/44'/0'/0'/0/")
<hdwallet.hdwallet.HDWallet object at 0x0000001E8BFB98D60>

```

from_index(*index: int, hardened: bool = False*) → *hdwallet.hdwallet.HDWallet*
 Derivation from Index.

Parameters

- **index** (*int*) – Derivation index.
- **hardened** (*bool*) – Hardened address, default to False.

Returns HDWallet – Hierarchical Deterministic Wallet instance.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_xprivate_key(xprivate_key=
↳ "xprv9s21ZrQH143K3xPGUzpogJeKtRdjHkK6muBJo8v7rEVRzT83xJgNcLpMoJXUf9wJFKfuHR4SGvf9gdShh4t9Vmjj")
↳ ")
>>> hdwallet.from_index(index=44, hardened=True)
>>> hdwallet.from_index(index=0, hardened=True)
>>> hdwallet.from_index(index=0, hardened=True)
>>> hdwallet.from_index(index=0)
>>> hdwallet.from_index(index=0)
<hdwallet.hdwallet.HDWallet object at 0x0000001E8BFB98D60>

```

root_xprivate_key(*encoded: bool = True*) → Optional[str]
 Get Root XPrivate Key.

Parameters **encoded** (*bool*) – Encoded root xprivate key, default to True.

Returns str – Root XPrivate Key.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_entropy(entropy="ee535b143b0d9d1f87546f9df0d06b1a")
>>> hdwallet.from_path(path="m/44'/0'/0'/0/")

↳ "

```

root_xpublic_key(*encoded: bool = True*) → Optional[str]
 Get Root XPublic Key.

Parameters **encoded** (*bool*) – Encoded root xpublic key, default to True.

Returns str – Root XPublic Key.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_entropy(entropy="ee535b143b0d9d1f87546f9df0d06b1a")

<hdwallet.hdwallet.HDWallet object at 0x000001E8BFB98D60>
>>> hdwallet.path()
None
```

uncompressed(*compressed: Optional[str] = None*) → str
Get Uncompressed Public Key.

Parameters **compressed** (*str*) – Compressed public key, default to None.

Returns *str* – Uncompressed public key.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash")

↳ "
```

compressed(*uncompressed: Optional[str] = None*) → str
Get Compressed Public Key.

Parameters **uncompressed** (*str*) – Uncompressed public key, default to None.

Returns *str* – Compressed public key.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash")

```

private_key() → str
Get Private Key.

Returns *str* – Private key.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_

```

public_key(*compressed: bool = True, private_key: Optional[str] = None*) → str
Get Public Key.

Parameters

- **compressed** (*bool*) – Compressed public key, default to True.
- **private_key** (*str*) – Private key hex string, default to None.

Returns str – Public key.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash")
>>> hdwallet.from_path(path="m/44'/0'/0'/0/0")
>>> hdwallet.public_key()
"02f93f58b97c3bb616645c3dda256ec946d87c45baf531984c022dd0fd1503b0a8"
```

strength() → Optional[int]
Get Entropy strength.

Returns int – Entropy strength.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash")
>>> hdwallet.strength()
160
```

entropy() → Optional[str]
Get Entropy hex string.

Returns str – Entropy hex string.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash")
>>> hdwallet.entropy()
"f24afe7fc1418815ee7fd256beb55518e7c34ecd"
```

mnemonic() → Optional[str]
Get Mnemonic words.

Returns str – Mnemonic words.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash")
>>> hdwallet.mnemonic()
"venture fitness paper little blush april rigid where find volcano fetch crack_
↳label polar dash"
```

(continues on next page)

passphrase() → Optional[str]

Get Mnemonic passphrase.

Returns str – Mnemonic passphrase.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.passphrase()
"meherett"
```

language() → Optional[str]

Get Mnemonic language.

Returns str – Mnemonic language.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.language()
"english"
```

cryptocurrency() → Optional[str]

Get Cryptocurrency name.

Returns str – Cryptocurrency name.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.cryptocurrency()
"Bitcoin"
```

symbol() → Optional[str]

Get Cryptocurrency symbol.

Returns str – Cryptocurrency symbol.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.symbol()
"BTC"
```

semantic() → Optional[str]

Get Extended semantic.

Returns str – Extended semantic.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.semantic()
"p2pkh"
```

network() → Optional[str]

Get Cryptocurrency network type.

Returns str – Cryptocurrency network type.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.network()
"mainnet"
```

seed() → Optional[str]

Get Seed hex string.

Returns str – Seed hex string.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0'/0'")
>>> hdwallet.seed()

↳"8d5f4fe5b81a6a6a18b08603b6b3f59df9f4bbb25d10c55d23e0cbdc5ee385e5fddad9d7e6114f11afdec459283"
↳"
```

path() → Optional[str]

Get Derivation path.

Returns str – Derivation path.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0'/0'")
>>> hdwallet.path()
"m/44'/0'/0'/0'/0'"
```

chain_code() → Optional[str]

Get Chain code.

Returns str – Chain code.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0'/0'")
>>> hdwallet.chain_code()
"ed45793b944d1f22522f2d6f48c487029fae2cfc999ed23087a148bcdda6314"
```

hash(private_key: Optional[str] = None)
Get Public Key Hash.

Returns str – Identifier.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0'/0'")
>>> hdwallet.hash()
"4d887566d408dfe5ea8090f2b716f9639523ca89"
```

finger_print() → str
Get Finger print.

Returns str – Finger print.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0'/0'")
>>> hdwallet.finger_print()
"4d887566"
```

p2pkh_address() → str
Get Pay to Public Key Hash (P2PKH) address.

Returns str – P2PKH address.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0'/0'")
>>> hdwallet.p2pkh_address()
"184xW5gWDnhS7LriL2JAZs1XGTJjimz7pq"
```

p2sh_address() → str
Get Pay to Script Hash (P2SH) address.

Returns str – P2SH address.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0/0")
>>> hdwallet.p2sh_address()
"3Jp6ad4ErhibQmhSRfavbPRiUyg2xTTT4j"

```

p2wpkh_address() → Optional[str]

Get Pay to Witness Public Key Hash (P2WPKH) address.

Returns str – P2WPKH address.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0/0")
>>> hdwallet.p2wpkh_address()
"bc1qfky82ek5pr07t65qjretw9hev2j8j5fdrn5hc"

```

p2wpkh_in_p2sh_address() → Optional[str]

Get P2WPKH nested in P2SH address.

Returns str – P2WPKH nested in P2SH address.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0/0")
>>> hdwallet.p2wpkh_in_p2sh_address()
"3CCrxPrHNa6ePbnB7qjh7S3vaPx9qiLc3e"

```

p2wsh_address() → Optional[str]

Get Pay to Witness Script Hash (P2WSH) address.

Returns str – P2WSH address.

```

>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0/0")
>>> hdwallet.p2wsh_address()
"bc1qaj2xa9j6eegcx1s3y8p6erw6vdgdxynasrd4hl3xuctht5edu3msdeshgf"

```

p2wsh_in_p2sh_address() → Optional[str]

Get P2WSH nested in P2SH address.

Returns str – P2WSH nested in P2SH address.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0'/0")
>>> hdwallet.p2wsh_in_p2sh_address()
"38YMonfh2yLFRViLrM2kdvZx8ctcp1vbbV"
```

wif() → Optional[str]
Get Wallet Important Format.

Returns str – Wallet Important Format.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0'/0")
>>> hdwallet.wif()
"KzsHWUJsrTWUUhBGPfMMxLLydiH7NhEn6z7mKHXD5qNkUWaC4TEen"
```

dumps() → dict
Get All HDWallet imformations.

Returns dict – All HDWallet imformations.

```
>>> from hdwallet import HDWallet
>>> from hdwallet.symbols import BTC
>>> hdwallet = HDWallet(symbol=BTC)
>>> hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush april_
↳rigid where find volcano fetch crack label polar dash", passphrase="meherett")
>>> hdwallet.from_path(path="m/44'/0'/0'/0'/0")

5.1 BIP32HDWallet

Class BIP32 Hierarchical Deterministic Wallet

```
class hdwallet.hdwallet.BIP32HDWallet(symbol: str = 'BTC', cryptocurrency: Optional[Any] = None,
                                     purpose: Union[int, Tuple[int, bool]] = 0, coin_type: Union[int,
                                     Tuple[int, bool]] = 0, account: Union[int, Tuple[int, bool]] = 0,
                                     change: bool = False, address: Union[int, Tuple[int, bool]] = 0)
```

BIP32 Hierarchical Deterministic Wallet

Parameters

- **symbol** (*str*) – Cryptocurrency symbol, defaults to BTC.
- **cryptocurrency** (*Cryptocurrency*) – Cryptocurrency instance, default to None.
- **purpose** (*int*, *tuple*) – Purpose index, default to 0.
- **coin_type** (*int*, *tuple*) – Coin type, default to 0.
- **account** (*int*, *tuple*) – Account index, default to 0.
- **change** (*bool*) – Change addresses, default to False.
- **address** (*int*, *tuple*) – Address index, default to 0.

Returns BIP32HDWallet – BIP32 Hierarchical Deterministic Wallet instance.

```
>>> from hdwallet import BIP32HDWallet
>>> from hdwallet.cryptocurrencies import QtumMainnet
>>> bip32_hdwallet: BIP32HDWallet = BIP32HDWallet(cryptocurrency=QtumMainnet,
↳purpose=0, coin_type=0, account=0, change=False, address=0)
<hdwallet.hdwallet.BIP32HDWallet object at 0x0000001EBC58E9F70>
```

address() → str

Get Pay to Public Key Hash (P2PKH) address.

Returns str – P2PKH address.

```
>>> from hdwallet import BIP32HDWallet
>>> from hdwallet.symbols import BTC
>>> bip32_hdwallet: BIP32HDWallet = BIP32HDWallet(symbol=BTC, purpose=44, coin_
↳type=0, account=0, change=False, address=0)
>>> bip32_hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush
↳april rigid where find volcano fetch crack label polar dash", passphrase=
↳"meherett")
>>> bip32_hdwallet.address()
"184xW5gWDnhS7LriL2JAZs1XGTJjimz7pq"
```

5.2 BIP44HDWallet

Class BIP44 Hierarchical Deterministic Wallet

```
class hdwallet.hdwallet.BIP44HDWallet(symbol: str = 'BTC', cryptocurrency: Optional[Any] = None,  
account: Union[int, Tuple[int, bool]] = 0, change: bool = False,  
address: Union[int, Tuple[int, bool]] = 0)
```

BIP44 Hierarchical Deterministic Wallet

Parameters

- **symbol** (*str*) – Cryptocurrency symbol, defaults to BTC.
- **cryptocurrency** (*Cryptocurrency*) – Cryptocurrency instance, default to None.
- **account** (*int, tuple*) – Account index, default to 0.
- **change** (*bool*) – Change addresses, default to False.
- **address** (*int, tuple*) – Address index, default to 0.

Returns BIP44HDWallet – BIP44 Hierarchical Deterministic Wallet instance.

```
>>> from hdwallet import BIP44HDWallet
>>> from hdwallet.cryptocurrencies import QtumMainnet
>>> bip44_hdwallet: BIP44HDWallet = BIP44HDWallet(cryptocurrency=QtumMainnet,
↳account=0, change=False, address=0)
<hdwallet.hdwallet.BIP44HDWallet object at 0x000001EBC58E9F70>
```

address() → *str*

Get Pay to Public Key Hash (P2PKH) address.

Returns *str* – P2PKH address.

```
>>> from hdwallet import BIP44HDWallet
>>> from hdwallet.symbols import BTC
>>> bip44_hdwallet: BIP44HDWallet = BIP44HDWallet(symbol=BTC, account=0,
↳change=False, address=0)
>>> bip44_hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush
↳april rigid where find volcano fetch crack label polar dash", passphrase=
↳"meherett")
>>> bip44_hdwallet.address()
"184xW5gWDnhS7LriL2JAZs1XGTJjimz7pq"
```

5.3 BIP49HDWallet

Class BIP49 Hierarchical Deterministic Wallet

```
class hdwallet.hdwallet.BIP49HDWallet(symbol: str = 'BTC', cryptocurrency: Optional[Any] = None,  
account: Union[int, Tuple[int, bool]] = 0, change: bool = False,  
address: Union[int, Tuple[int, bool]] = 0)
```

BIP49 Hierarchical Deterministic Wallet

Parameters

- **symbol** (*str*) – Cryptocurrency symbol, defaults to BTC.
- **cryptocurrency** (*Cryptocurrency*) – Cryptocurrency instance, default to None.

- **account** (*int*, *tuple*) – Account index, default to 0.
- **change** (*bool*) – Change addresses, default to False.
- **address** (*int*, *tuple*) – Address index, default to 0.

Returns BIP49HDWallet – BIP49 Hierarchical Deterministic Wallet instance.

```
>>> from hdwallet import BIP49HDWallet
>>> from hdwallet.cryptocurrencies import QtumMainnet
>>> bip49_hdwallet: BIP49HDWallet = BIP49HDWallet(cryptocurrency=QtumMainnet,
↳account=0, change=False, address=0)
<hdwallet.hdwallet.BIP49HDWallet object at 0x000001EBC58E9F70>
```

address() → str

Get P2WPKH nested in P2SH address.

Returns str – P2PKH In P2SH address.

```
>>> from hdwallet import BIP49HDWallet
>>> from hdwallet.symbols import BTC
>>> bip49_hdwallet: BIP49HDWallet = BIP49HDWallet(symbol=BTC, account=0,
↳change=False, address=0)
>>> bip49_hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush
↳april rigid where find volcano fetch crack label polar dash", passphrase=
↳"meherett")
>>> bip49_hdwallet.address()
"3HtjZPoiUh9DA3kzQL9XZ29aFdCzouWB6T"
```

5.4 BIP84HDWallet

Class BIP84 Hierarchical Deterministic Wallet

```
class hdwallet.hdwallet.BIP84HDWallet(symbol: str = 'BTC', cryptocurrency: Optional[Any] = None,
account: Union[int, Tuple[int, bool]] = 0, change: bool = False,
address: Union[int, Tuple[int, bool]] = 0)
```

BIP84 Hierarchical Deterministic Wallet

Parameters

- **symbol** (*str*) – Cryptocurrency symbol, defaults to BTC.
- **cryptocurrency** (*Cryptocurrency*) – Cryptocurrency instance, default to None.
- **account** (*int*, *tuple*) – Account index, default to 0.
- **change** (*bool*) – Change addresses, default to False.
- **address** (*int*, *tuple*) – Address index, default to 0.

Returns BIP84HDWallet – BIP84 Hierarchical Deterministic Wallet instance.

```
>>> from hdwallet import BIP84HDWallet
>>> from hdwallet.cryptocurrencies import QtumMainnet
>>> bip84_hdwallet: BIP84HDWallet = BIP84HDWallet(cryptocurrency=QtumMainnet,
↳account=0, change=False, address=0)
<hdwallet.hdwallet.BIP84HDWallet object at 0x000001EBC58E9F70>
```

address() → str

Get Pay to Witness Public Key Hash (P2WPKH) address.

Returns str – Pay to Witness Public Key Hash (P2WPKH) address.

```
>>> from hdwallet import BIP84HDWallet
>>> from hdwallet.symbols import BTC
>>> bip84_hdwallet: BIP84HDWallet = BIP84HDWallet(symbol=BTC, account=0,
↳ change=False, address=0)
>>> bip84_hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush,
↳ april rigid where find volcano fetch crack label polar dash", passphrase=
↳ "meherett")
>>> bip84_hdwallet.address()
"bc1qs95czhkhawdq958gjsrww4mh6amu2ysx20w86d"
```

5.5 BIP141HDWallet

Class BIP141 Hierarchical Deterministic Wallet

```
class hdwallet.hdwallet.BIP141HDWallet(symbol: str = 'BTC', cryptocurrency: Optional[Any] = None,
path: Optional[Union[str, hdwallet.derivations.Derivation]] =
None, semantic: str = 'p2wpkh')
```

BIP141 Hierarchical Deterministic Wallet

Parameters

- **symbol** (str) – Cryptocurrency symbol, defaults to BTC.
- **cryptocurrency** (Cryptocurrency) – Cryptocurrency instance, defaults to None.
- **path** (str) – Derivation path.
- **semantic** (str) – Extended semantic, defaults to P2WPKH.

Returns BIP141HDWallet – BIP141 Hierarchical Deterministic Wallet instance.

```
>>> from hdwallet import BIP141HDWallet
>>> from hdwallet.cryptocurrencies import QtumMainnet
>>> bip141_hdwallet: BIP141HDWallet = BIP141HDWallet(cryptocurrency=QtumMainnet,
↳ path="m/0/0", semantic="p2wpkh")
<hdwallet.hdwallet.BIP141HDWallet object at 0x0000001EBC58E9F70>
```

address() → str

Get P2WPKH, P2WPKH_IN_P2SH, P2WSH or P2WPKH_IN_P2SH addresses by semantic.

Returns str – P2WPKH, P2WPKH_IN_P2SH, P2WSH or P2WPKH_IN_P2SH addresses.

```
>>> from hdwallet import BIP141HDWallet
>>> from hdwallet.symbols import BTC
>>> bip141_hdwallet: BIP141HDWallet = BIP141HDWallet(symbol=BTC, path="m/44'/0'/
↳ 0'/0/0", semantic="p2wsh")
>>> bip141_hdwallet.from_mnemonic(mnemonic="venture fitness paper little blush,
↳ april rigid where find volcano fetch crack label polar dash", passphrase=
↳ "meherett")
>>> bip141_hdwallet.address()
"bc1qaj2xa9j6eegcxls3y8p6erw6vdgdxynd4hl3xuctht5edu3msdeshgf"
```

DERIVATION

class `hdwallet.derivations.Derivation`(*path: Optional[str] = None, semantic: str = 'p2pkh'*)
Hierarchical Deterministic Wallet Derivation's

Parameters

- **path** (*str*) – Derivation path.
- **semantic** (*str*) – Extended semantic, defaults to P2PKH.

Returns Derivation – Derivation instance.

```
>>> from hdwallet.derivations import Derivation
>>> Derivation()
<hdwallet.derivations.Derivation object at 0x000001EBC58E9F70>
>>> str(Derivation())
'''
>>> str(Derivation(path="m/44'/0'/0'/0/0", semantic="p2pkh"))
"m/44'/0'/0'/0/0"
```

Note: Do not forget all derivation paths are start swith 'm/' prefix.

classmethod `from_path`(*path: str*) → *hdwallet.derivations.Derivation*
Derivation from path.

Parameters `path` (*str*, `Derivation`) – Derivation path.

Returns Derivation – Derivation instance.

```
>>> from hdwallet.derivations import Derivation
>>> derivation = Derivation()
>>> derivation.from_path(path="m/44'/0'/0'/0/0")
<hdwallet.derivation.Derivation object at 0x000001E8BFB98D60>
```

from_index(*index: int, hardened: bool = False*) → *hdwallet.derivations.Derivation*
Derivation from path.

Parameters

- **index** (*int*) – Derivation index.
- **hardened** (*bool*) – Hardened address, default to False.

Returns Derivation – Derivation instance.

```
>>> from hdwallet.derivations import Derivation
>>> derivation = Derivation()
>>> derivation.from_index(index=44, hardened=True)
>>> derivation.from_index(index=0, hardened=True)
>>> derivation.from_index(index=0, hardened=True)
>>> derivation.from_index(index=0)
>>> derivation.from_index(index=0)
<hdwallet.derivation.Derivation object at 0x000001E8BFB98D60>
```

clean_derivation() → *hdwallet.derivations.Derivation*

Clean derivation path or indexes.

Returns Derivation – Derivation instance.

```
>>> from hdwallet.derivations import Derivation
>>> derivation = Derivation()
>>> derivation.from_path(path="m/44'/0'/'0/0/0")
>>> str(derivation)
"m/44'/0'/'0/0/0"
>>> derivation.clean_derivation()
<hdwallet.wallet.HDWallet object at 0x000001E8BFB98D60>
>>> str(derivation)
""
```

6.1 BIP32Derivation

class `hdwallet.derivations.BIP32Derivation`(*cryptocurrency: Optional[Any] = None, purpose: Union[int, Tuple[int, bool]] = 0, coin_type: Union[int, Tuple[int, bool]] = 0, account: Union[int, Tuple[int, bool]] = 0, change: bool = False, address: Union[int, Tuple[int, bool]] = 0*)

Hierarchical Deterministic Wallet BIP32 Derivation

Parameters

- **cryptocurrency** (*Cryptocurrency*) – Cryptocurrency instance, default to None.
- **purpose** (*int, tuple*) – Purpose index, default to 0.
- **coin_type** (*int, tuple*) – Coin type, default to 0.
- **account** (*int, tuple*) – Account index, default to 0.
- **change** (*bool*) – Change addresses, default to False.
- **address** (*int, tuple*) – Address index, default to 0.

Returns BIP32Derivation – BIP32Derivation instance.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> from hdwallet.cryptocurrencies import BitcoinMainnet
>>> BIP32Derivation(cryptocurrency=BitcoinMainnet)
<hdwallet.derivations.Derivation object at 0x000001EBC58E9F70>
>>> str(BIP32Derivation(cryptocurrency=BitcoinMainnet))
"m/0'/'0'/'0'/'0/0"
```

from_purpose(*purpose: int, hardened: bool = True*) → *hdwallet.derivations.BIP32Derivation*

Derivation from purpose index.

Parameters

- **purpose** (*int*) – Purpose index.
- **hardened** (*bool*) – Hardened, default to True.

Returns BIP32Derivation – BIP32Derivation instance.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> bip32_derivation = BIP32Derivation()
>>> bip32_derivation.from_purpose(purpose=0, hardened=True)
<hdwallet.derivation.BIP32Derivation object at 0x000001E8BFB98D60>
```

from_coin_type(*coin_type: int, hardened: bool = True*) → *hdwallet.derivations.BIP32Derivation*
Derivation from Coin Type index.

Parameters

- **coin_type** (*int*) – Coin type index.
- **hardened** (*bool*) – Hardened, default to True.

Returns BIP32Derivation – BIP32Derivation instance.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> bip32_derivation = BIP32Derivation()
>>> bip32_derivation.from_coin_type(coin_type=56, hardened=True)
<hdwallet.derivation.BIP32Derivation object at 0x000001E8BFB98D60>
```

from_account(*account: int, hardened: bool = True*) → *hdwallet.derivations.BIP32Derivation*
Derivation from Account index.

Parameters

- **account** (*int*) – Coin type index.
- **hardened** (*bool*) – Hardened, default to True.

Returns BIP32Derivation – BIP32Derivation instance.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> bip32_derivation = BIP32Derivation()
>>> bip32_derivation.from_account(account=1, hardened=True)
<hdwallet.derivation.BIP32Derivation object at 0x000001E8BFB98D60>
```

from_change(*change: bool*) → *hdwallet.derivations.BIP32Derivation*
Derivation from external Change.

Parameters **change** (*bool*) – External change.

Returns BIP32Derivation – BIP32Derivation instance.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> bip32_derivation = BIP32Derivation()
>>> bip32_derivation.from_account(change=True)
<hdwallet.derivation.BIP32Derivation object at 0x000001E8BFB98D60>
```

from_address(*address: int, hardened: bool = False*) → *hdwallet.derivations.BIP32Derivation*
Derivation from Address index.

Parameters

- **address** (*int*) – Address index.
- **hardened** (*bool*) – Hardened, default to True.

Returns BIP32Derivation – BIP32Derivation instance.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> bip32_derivation = BIP32Derivation()
>>> bip32_derivation.from_address(address=1, hardened=True)
<hdwallet.derivation.BIP32Derivation object at 0x0000001E8BFB98D60>
```

clean_derivation() → *hdwallet.derivations.BIP32Derivation*

Clean derivation path or indexes.

Returns Derivation – Derivation instance.

```
>>> from hdwallet.derivations import Derivation
>>> derivation = Derivation()
>>> derivation.from_path(path="m/44'/0'/0'/0'")
>>> str(derivation)
"m/44'/0'/0'/0'"
>>> derivation.clean_derivation()
<hdwallet.wallet.HDWallet object at 0x0000001E8BFB98D60>
>>> str(derivation)
""
```

purpose() → str

Gey Purpose index.

Returns str – Purpose index.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> bip32_derivation = BIP32Derivation()
>>> bip32_derivation.from_purpose(purpose=0, hardened=True)
>>> bip32_derivation.purpose()
"0"
```

coin_type() → str

Gey Coin Type index.

Returns str – Coin Type index.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> bip32_derivation = BIP32Derivation()
>>> bip32_derivation.coin_type(coin_type=15, hardened=True)
>>> bip32_derivation.coin_type()
"15"
```

account() → str

Gey Account index.

Returns str – Account index.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> bip32_derivation = BIP32Derivation()
>>> bip32_derivation.from_account(account=1, hardened=True)
>>> bip32_derivation.account()
"1"
```

change(*number: bool = False*) → Union[str, bool]

Gey external Change.

Parameters **number** (*bool*) – Return type, default to False.

Returns str – External change index.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> bip32_derivation = BIP32Derivation()
>>> bip32_derivation.from_change(change=True)
>>> bip32_derivation.change(number=True)
"1"
>>> bip32_derivation.change(number=False)
True
```

address() → str

Gey Address index.

Returns str – Address index.

```
>>> from hdwallet.derivations import BIP32Derivation
>>> bip32_derivation = BIP32Derivation()
>>> bip32_derivation.from_address(address=1, hardened=True)
>>> bip32_derivation.address()
"1"
```

6.2 BIP44Derivation

```
class hdwallet.derivations.BIP44Derivation(cryptocurrency: Any, account: Union[int, Tuple[int, bool]]
                                           = 0, change: bool = False, address: Union[int, Tuple[int,
                                           bool]] = 0)
```

Hierarchical Deterministic Wallet BIP44 Derivation

Parameters

- **cryptocurrency** (*Cryptocurrency*) – Cryptocurrency instance.
- **account** (*int, tuple*) – Account index, default to 0.
- **change** (*bool*) – Change addresses, default to False.
- **address** (*int, tuple*) – Address index, default to 0.

Returns BIP44Derivation – BIP44Derivation instance.

```
>>> from hdwallet.derivations import BIP44Derivation
>>> from hdwallet.cryptocurrencies import BitcoinMainnet
>>> BIP44Derivation(cryptocurrency=BitcoinMainnet)
<hdwallet.derivations.Derivation object at 0x000001EBC58E9F70>
>>> str(BIP44Derivation(cryptocurrency=BitcoinMainnet))
"m/44'/0'/0'/0/0"
```

6.3 BIP49Derivation

```
class hdwallet.derivations.BIP49Derivation(cryptocurrency: Any, account: Union[int, Tuple[int, bool]]
                                           = 0, change: bool = False, address: Union[int, Tuple[int,
                                           bool]] = 0)
```

Hierarchical Deterministic Wallet BIP49 Derivation

Parameters

- **cryptocurrency** (*Cryptocurrency*) – Cryptocurrency instance.
- **account** (*int*, *tuple*) – Account index, default to 0.
- **change** (*bool*) – Change addresses, default to False.
- **address** (*int*, *tuple*) – Address index, default to 0.

Returns BIP49Derivation – BIP49Derivation instance.

```
>>> from hdwallet.derivations import BIP49Derivation
>>> from hdwallet.cryptocurrencies import BitcoinMainnet
>>> BIP49Derivation(cryptocurrency=BitcoinMainnet)
<hdwallet.derivations.Derivation object at 0x0000001EBC58E9F70>
>>> str(BIP49Derivation(cryptocurrency=BitcoinMainnet))
"m/49'/0'/0'/0/0"
```

6.4 BIP84Derivation

```
class hdwallet.derivations.BIP84Derivation(cryptocurrency: Any, account: Union[int, Tuple[int, bool]]
                                           = 0, change: bool = False, address: Union[int, Tuple[int,
                                           bool]] = 0)
```

Hierarchical Deterministic Wallet BIP84 Derivation

Parameters

- **cryptocurrency** (*Cryptocurrency*) – Cryptocurrency instance.
- **account** (*int*, *tuple*) – Account index, default to 0.
- **change** (*bool*) – Change addresses, default to False.
- **address** (*int*, *tuple*) – Address index, default to 0.

Returns BIP84Derivation – BIP84Derivation instance.

```
>>> from hdwallet.derivations import BIP84Derivation
>>> from hdwallet.cryptocurrencies import BitcoinMainnet
>>> BIP84Derivation(cryptocurrency=BitcoinMainnet)
<hdwallet.derivations.Derivation object at 0x0000001EBC58E9F70>
>>> str(BIP84Derivation(cryptocurrency=BitcoinMainnet))
"m/84'/0'/0'/0/0"
```

6.5 BIP141Derivation

```
class hdwallet.derivations.BIP141Derivation(cryptocurrency: Any, path: Optional[Union[str,  
                                          hdwallet.derivations.Derivation]] = None, semantic: str =  
                                          'p2wpkh')
```

Hierarchical Deterministic Wallet BIP141 Derivation

Parameters

- **path** (*str*) – Derivation path, default to None.
- **semantic** (*str*) – Extended semantic, defaults to P2WPKH.

Returns BIP141Derivation – BIP141Derivation instance.

```
>>> from hdwallet.derivations import BIP141Derivation  
>>> from hdwallet.cryptocurrencies import BitcoinMainnet  
>>> BIP141Derivation(cryptocurrency=BitcoinMainnet)  
<hdwallet.derivations.Derivation object at 0x000001EBC58E9F70>  
>>> str(BIP141Derivation(cryptocurrency=BitcoinMainnet))  
"m/44'/0'/0'/0/0"
```

UTILS

`hdwallet.utils.generate_passphrase`(*length: int = 32*) → str
Generate entropy hex string.

Parameters `length` (*int*) – Passphrase length, default to 32.

Returns str – Passphrase hex string.

```
>>> from hdwallet.utils import generate_passphrase
>>> generate_passphrase(length=32)
"N39rPfa3QvF2Tm2nPyoBpXNiBFXJywTz"
```

`hdwallet.utils.generate_entropy`(*strength: int = 128*) → str
Generate entropy hex string.

Parameters `strength` (*int*) – Entropy strength, default to 128.

Returns str – Entropy hex string.

```
>>> from hdwallet.utils import generate_entropy
>>> generate_entropy(strength=128)
"ee535b143b0d9d1f87546f9df0d06b1a"
```

`hdwallet.utils.generate_mnemonic`(*language: str = 'english', strength: int = 128*) → str
Generate mnemonic words.

Parameters

- `language` (*str*) – Mnemonic language, default to english.
- `strength` (*int*) – Entropy strength, default to 128.

Returns str – Mnemonic words.

```
>>> from hdwallet.utils import generate_mnemonic
>>> generate_mnemonic(language="french")
"sceptre capter sequence girafe absolu relatif fleur zoologie muscle sirop saboter_
↳parure"
```

`hdwallet.utils.is_entropy`(*entropy: str*) → bool
Check entropy hex string.

Parameters `entropy` (*str*) – Mnemonic words.

Returns bool – Entropy valid/invalid.

```
>>> from hdwallet.utils import is_entropy
>>> is_entropy(entropy="ee535b143b0d9d1f87546f9df0d06b1a")
True
```

`hdwallet.utils.is_mnemonic(mnemonic: str, language: Optional[str] = None) → bool`

Check mnemonic words.

Parameters

- **mnemonic** (*str*) – Mnemonic words.
- **language** (*str*) – Mnemonic language, default to None.

Returns bool – Mnemonic valid/invalid.

```
>>> from hdwallet.utils import is_mnemonic
>>> is_mnemonic(mnemonic="sceptre capter sequence girafe absolu relatif fleur_
↳zoologie muscle sirop saboter parure")
True
```

`hdwallet.utils.get_entropy_strength(entropy: str) → int`

Get entropy strength.

Parameters **entropy** (*str*) – Entropy hex string.

Returns int – Entropy strength.

```
>>> from hdwallet.utils import get_entropy_strength
>>> get_entropy_strength(entropy="ee535b143b0d9d1f87546f9df0d06b1a")
128
```

`hdwallet.utils.get_mnemonic_strength(mnemonic: str, language: Optional[str] = None) → int`

Get mnemonic strength.

Parameters

- **mnemonic** (*str*) – Mnemonic words.
- **language** (*str*) – Mnemonic language, default to None.

Returns int – Mnemonic strength.

```
>>> from hdwallet.utils import get_mnemonic_strength
>>> get_mnemonic_strength(mnemonic="sceptre capter sequence girafe absolu relatif_
↳fleur zoologie muscle sirop saboter parure")
128
```

`hdwallet.utils.get_mnemonic_language(mnemonic: str) → str`

Get mnemonic language.

Parameters **mnemonic** (*str*) – Mnemonic words.

Returns str – Mnemonic language.

```
>>> from hdwallet.utils import get_mnemonic_language
>>> get_mnemonic_language(mnemonic="sceptre capter sequence girafe absolu relatif_
↳fleur zoologie muscle sirop saboter parure")
"french"
```

`hdwallet.utils.entropy_to_mnemonic(entropy: str, language: str = 'english') → str`
Get mnemonic from entropy hex string.

Parameters

- **entropy** (*str*) – Entropy hex string.
- **language** (*str*) – Mnemonic language, default to english.

Returns *str* – Mnemonic words.

```
>>> from hdwallet.utils import entropy_to_mnemonic
>>> entropy_to_mnemonic(entropy="ee535b143b0d9d1f87546f9df0d06b1a", language="korean")
↪
"                "
```

`hdwallet.utils.mnemonic_to_entropy(mnemonic: str, language: Optional[str] = None) → str`
Get entropy from mnemonic words.

Parameters

- **mnemonic** (*str*) – Mnemonic words.
- **language** (*str*) – Mnemonic language, default to english.

Returns *str* – Entropy hex string.

```
>>> from hdwallet.utils import mnemonic_to_entropy
>>> mnemonic_to_entropy(mnemonic="                ", language="korean")
"ee535b143b0d9d1f87546f9df0d06b1a"
```
